A trade and trading signal is a trigger for the action, either to buy or sell a security or other asset, generated by analysis. That analysis can be human-generated using technical analysis or indicators, it can be generated using mathematical algorithms based on market Price Action, possibly in combination with other market factors such as economic indicators.

Find out more

DeFi applications operate in a complex regulatory environment that involves overlapping laws and regulations from various jurisdictions. Unlike centralized financial institutions, such as banks and brokerages, DeFi projects often operate decentralized and pseudonymous, making it challenging for regulators to enforce compliance.
