

Why Public WiFi Is Insecure for Crypto Users

Public WiFi networks are insecure, because they often lack proper encryption. This lack of security makes it easier for cybercriminals to intercept data.

'Fortnite' skins and PokéCoins may not seem more like a fun gimmick than an in-game necessity, but these kinds of in-game purchases make up an enormous \$70 billion-plus market. In-game purchases like skins (i.e., digital assets) are by and large limited to the respective game ecosystems in which they are bought.

Social Media is the lifeline of today's generation. Creators are making money from social media as much as consuming it. There are about 5.6 billion social media users in 2024 and the creator economy is expected to generate \$22.8 billion worldwide in 2024. However, creators face the problem of lack of data ownership and autonomy.
