Social trading is a relatively new concept that is gaining popularity. Thanks to its transparency, comprehensibility of the system, and opportunities for improving the trading experience, copy trading has become a distinct form of trading. Its main advantage is that it has opened the doors to the market for every investor who previously did not know how to trade.

In blockchain technology, hashes are data structures that act as digital fingerprints on the block where certain data is added. The hash can be used to verify whether a piece of information was changed or tampered with after being stored. A blockchain hash is generated automatically, providing a fixed-length output for any given input value.
