EIP-7702 is set to make account abstraction come to life on Ethereum at scale with its lean and simple implementation. Account abstraction allows the creation of smart contract accounts to initiate and execute transactions without needing an externally owned account (EOA). This makes web3 so seamless that everyday users might not even notice they're using it.

With the rise of popularity and value of cryptocurrencies such as Bitcoin, Ethereum, and Dogecoin has grown, users have become more vulnerable to fraud. To begin with, assets and transactions are provided and controlled by users. They might fall prey to fraudsters and become victims of scams if there is no authority to oversee the operation of bitcoin channels.
