Cryptocurrency staking has surfaced as one of the most lucrative ways of earning a passive income. Staking is essentially a contribution to a blockchain network by locking your cryptocurrency as collateral for running the said network. In return, you receive rewards. This is a source of income without becoming a full-time trader in digital assets.

The dollar's share of global reserves has dropped to 59% in 2024, down from 72% in 2002. BRICS countries are pushing hard to use their own currencies in trade, especially China with its growing payment system. Despite the decline, the USD still dominates global reserves, trade, and transactions, with no real rival yet.

Restaking is a way to make your crypto work harder for you. It starts with regular staking, where you lock up your crypto to help secure a blockchain network. With restaking, you take those already staked coins and use them again. But here's the cool part – you don't have to unstake them first. You can use these staked coins to support other blockchain services or apps.
