In the fast-changing world of blockchain tech, Decentralized Applications (DApps) play a big role. Unlike regular apps, DApps run on decentralized networks, which makes them open, safe, and user-controlled. Earning to build DApps is key for blockchain coders, as it can shake up industries by cutting out middlemen and creating trustless interactions.

Blockchains were originally designed to be transparent, with every wallet and transaction on public display. Many supporters see this 'trustlessness' as a strength, but there are some obvious drawbacks, such as the security risk of having all of your financial activity available on-chain. Find about Garbled Circuits technology and what it could do for crypto.

NFTs can be defined as cryptographically protected tokens pointing to a singular asset's ownership. Unlike bitcoins, which are uniform and can be traded once and are actual fungible financial assets, every NFT is unique and cannot be traded at par with another. This is what gives NFTs their value and, revolutionize the ownership of digital assets.
