Virtual assistants like Apple's Siri, Amazon's Alexa, and Google Assistant marked the initial phase of AI integration into consumer technology. Introduced in the early 2010s, these assistants utilized Natural Language Processing (NLP) to understand and respond to user commands. Tasks such as setting reminders, answering queries, and controlling smart home devices became as simple as a voice command. The progression from virtual assistants to autonomous agents signifies a shift from reactive task execution to proactive decision-making.
