Cardano is a Blockchain protocol which aims to be a smart contract platform, launch decentralized applications, tokens, and all the other features we expect from these types of projects. It is the first major protocol built as a Proof of Stake (PoS) from the ground up. It also follows a more disciplined research philosophy. All of the papers the Cardano Foundation prepares are peer-reviewed using academic standards.

Pakistan's crypto envoy Bilal Bin Saqib met El Salvador's President Bukele to boost crypto collaboration. The country planned to allocate 2,000 MW for Bitcoin mining and creating a national reserve, though IMF approval is needed. Pakistan launched the Pakistan Virtual Assets Regulatory Authority (PVARA) in July 2025. Pakistan's interest in digital assets comes as it works under a \$7 billion IMF program arranged in 2024, an arrangement that remains in place through 2027. This new collaboration reflects how digital currencies are entering the realm of international relations.
