Australia is moving forward with an important decision in digital finance. The Australian Securities and Investments Commission (ASIC) has introduced a new rule that makes it easier for companies to distribute stablecoins. This rule provides some businesses with legal leeway from requiring multiple licenses.

A new study by the Defi Education Fund, conducted with Ipsos, shows that many Americans are frustrated with traditional banks. People want full control over their money and the ability to transact directly with others without the “middleman”. At the same time, there is excitement about crypto and DeFi that could make finance fairer, more affordable, and safer.

Swedish politicians of the Swedish Democrats party have introduced a bill to create a national Bitcoin depository. This proposal calls on the government to research the potential of Bitcoin as a strategic financial tool with traditional gold and currency reserves. The idea behind the move is to cushion Sweden's economy against inflation and geopolitical risks through the diversification of the country's holdings in cryptocurrency.

In a crypto landscape dominated by speculation and hype, Zero Knowledge Proof (ZKP) proposes a radically different foundation: a system where truth has monetary value, and accuracy is rewarded through verifiable participation. Positioned as an upcoming crypto presale, Zero Knowledge Proof (ZKP) builds on one of the most fascinating ideas in decentralized systems, that knowledge, when proven, can become an asset. This is not a theory. It's a blockchain protocol rooted in game theory, accountability, and truth economics.
